Education

- **Anna University** — Chennai, India
  Bachelor of Engineering in ECE. — *2015 – 2019*

Technical Skills

- **Programming Languages:** Java, Python, Typescript (HTML, CSS).
- **Databases:** MySQL, Redis, SQL Server, Elasticsearch (Basic).
- **Frameworks:** Spring Boot, Kafka, RabbitMQ, Microservice, Spring Batch, Hibernate, JPA, Junit, Angular.
- **Tools & Technologies:** AI Agents, Jenkins, Docker, Kubernetes, Azure, AWS, GCP, Splunk, Grafana.

Relevant Experience

- **Walmart Global Tech India** — Chennai, India
  Software Engineer III — *Dec 2023 – Present*

  - Worked on Walmart's **Returns Platform**, owning multiple initiatives end-to-end across requirements gathering, solution design, implementation, testing, production deployment, and post-production support.
  - Automated **database purging** across multiple shards using Walmart's in-house ML platform and improved database performance through **index rebuilding and table partitioning**, reducing manual operational effort and improving query efficiency.
  - Designed and delivered **Local Marketplace return initiatives** which annualized revenue of **$12M** to production, including development, end-to-end testing, integration testing, deployment, and post-production validation.
  - Contributed to the **SWAT/L3 production support team**, diagnosing and resolving multiple high-priority production issues within strict SLAs through root-cause analysis, mitigation, and permanent fixes.
  - Built multiple **AI-powered developer productivity** skills and debugging tools, helping engineers accelerate code analysis, troubleshooting, and repetitive development workflows.
  - Improved engineering productivity by approximately **89%** through AI-assisted debugging and automation, reducing investigation time from **18 hours to 4 hours** for recurring development and production-support scenarios.

- **Schneider Electric** — Bangalore, India
  Software, Senior Design Engineer — *Dec 2022 – Dec 2023*

  - Implemented a **server-side pagination API using Spring Pageable**, reducing page load time from **1.2 minutes to 150 milliseconds** and significantly improving application responsiveness for large datasets.
  - Designed and implemented **RabbitMQ-based asynchronous messaging**, replacing synchronous inter-application communication, and achieving a **40% reduction in request latency** while improving fault tolerance and system reliability.
  - Optimized **Spring Batch processing** for importing and processing data from a PIM system containing **millions of products and product attributes**, introducing parallel processing to improve throughput, scalability, and reliability.
  - Implemented a **distributed locking mechanism using Spring** to prevent concurrent updates across distributed services, ensuring data consistency, and eliminating recurring data-conflict scenarios.

- **Revature** — Chennai, India
  Software Engineer – Full Stack — *Aug 2019 – Dec 2022*

  - Diagnosed and resolved production issues as a key member of the **Operations & Maintenance (O&M) team**, performing root cause analysis using **AWS CloudWatch and Tomcat logs**, which contributed to a **25% reduction in critical incidents** and improved system stability.
  - Designed and implemented multiple **caching layers**, including **Redis** and **L2 cache with an LRU eviction strategy**, improving data retrieval efficiency, and reducing repeated backend/database calls.
  - Implemented an optimized **Angular change-detection strategy** to reduce unnecessary UI rendering and improve page responsiveness.
  - Integrated multiple **third-party APIs** with **rate limiting, fault-tolerance mechanisms, and secure authorization controls**, improving the reliability and resilience of external service integrations.
  - Optimized several **REST APIs** to achieve response times of **under 200 ms.**

Honors and Achievements

- Bravo Award 2025
- Badges from my leadership – Fire Fighter – Collaborator - 2025
- Received the Star of the sprint several times in 2023.
- Secured 3rd place in Trailhead student championship 2018.

Certifications and Courses

- AI Engineer at IIT Roorkee, 2026
- Master Program Courses: *Data Structure, Analysis of Algorithm, Operating Systems, System Design, and Data Engineering.*
